

4569 WEATHERPROOF HARDWARE

Specialized for Detachable Trailers

XT-4569

WEATHERPROOF HARDWARE

The XT-4569 may cost a bit more than some of our other equipment but you get what you pay for and this bit outshines the rest in every way.

This is the most versatile piece of hardware Matrack has to offer.

This device serves both as an asset tracking device and a telematics system with all its own additional fail-safe features. The hardware can be set to update between once every 12 hours all the way to once every minute. Not to mention the XT-4569 is virtually weatherproof and tamperproof.

VIRTUAL IGNITION MODE

Connect all 3 (red, black, and white) wires during the installation. It is the default mode of operation and all functions are operational.

In the case of power failure, this tracking unit activates an internal battery connected to a specialized motion sensor that sends tracking updates based on the movement of the vehicle. ignition on/off and engine status reports are unavailable during virtual ignition. This internal backup system allows the XT-4569 to operate without a power source for 2 weeks before needing a charge.

- High Quality Housing Enclosure
- Internal Battery

AGGRESSIVE TRACKING MODE

Aggressive tracking mode is primarily a theft prevention / recovery function found with our MA-1080. In the case of stolen or missing assets, this function can be activated at any time to increase the frequency of tracking updates. This allows the Matrack team to follow the transit of the missing asset so that authorities can be alerted and the asset may be recovered.

GEOFENCE/AGGRESSIVE TRACKING TRIGGER

Our Geofencing function allows you to build an invisible perimeter around a designated asset. If this perimeter is crossed, the owner of the asset will be alerted immediately and Aggressive Tracking Mode, will automatically be triggered. Create up to 10 geofences on each account.

REAL TIME TRACKING & TRAVEL LOG REPORTS

This comprehensive tracking and report system is easy to read and includes details such as whether the engine was on or off, latitude and longitude coordinates of the specified event, street address, battery level, speed, mileage, and direction.

VARIOUS CUSTOM ALERT SETTINGS

Our customizable alert system, you can fine tune your asset monitoring to fit whatever requirements you could ever need to meet. Our alert system includes alert settings for speeding, ignition on/off, tow alerts, low battery, etc

DISPATCH MANAGER SYSTEM

Our Dispatch Manager system is specifically organized to streamline working operations of fleet and trucking businesses. This system allows you to map out all jobs and deliveries directly into our Matrack GPS tracking platform, organize jobs based on priority, assign jobs and deliveries to your different drivers, and automatically map out the optimal routes from job to job, in order to optimize your businesses fuel efficiency

IFTA FUEL TAX REPORTS

IFTA fuel tax reports are required for intrastate commercial vehicles. These reports are calculated based on the number of miles driven through each state relative to the amount of fuel purchased per state. Based on our data records, we calculate and provide these reports to you so you don't have to.

ARRIVAL TRACKING SYSTEM

We give you a way to provide your clients with the means to track their deliveries in transit! Just let us know you want a tracking link for your customers and we will have you covered.

PREVENTATIVE MAINTENANCE ALERTS

Set your system to alert you anytime a vehicle maintenance is needed! (Eg. Tire rotations, Oil changes, Etc.) BLINK ROADSIDE ASSISTANCE Matrack Inc. has partnered up with BLINK Roadside Assistance to provide you with heavily discounted rates on the most responsive emergency services available. Ask for more details.
